

Discover & Protect Your App Security Vulnerabilities

Our insights for eXo Platform

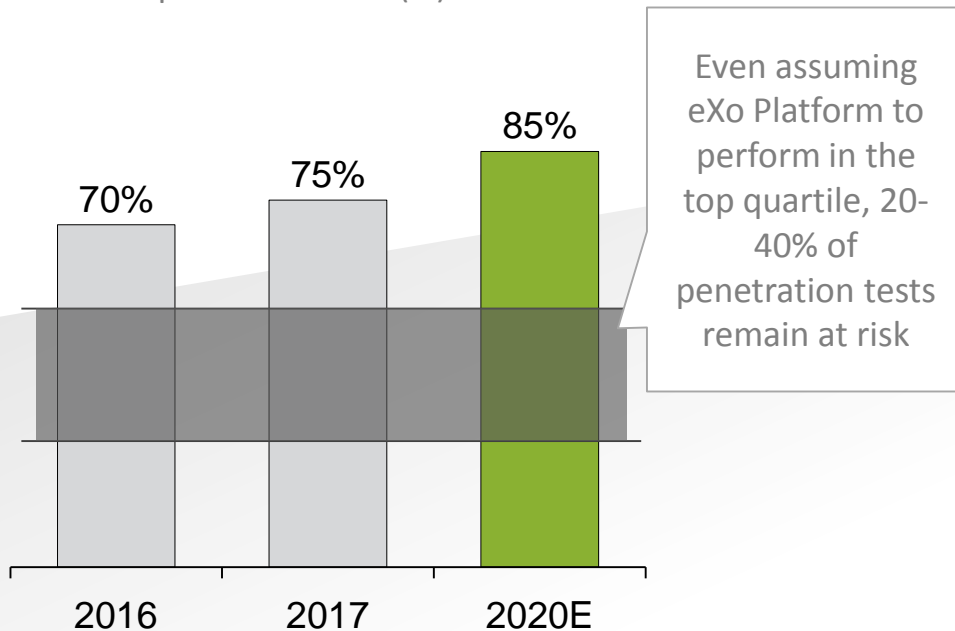

Business case: SEWORKS can enhance eXo Platform's software protection and vulnerability detection with an offensive strategy

Our analysis suggests that more and more apps are failing state-of-art security tests

Number of enterprise-grade apps failing security tests as per state-of-art (%)

SEWORKS can help eXo Platform reduce this risk by acting with 3 distinct tools

I

PENTOMA

- Helps you learn your web app and server security weaknesses through remote AI hacking attacks.

II

APPSOLID

- Applies advanced mobile app protection, monitors any suspicious activity and shuts down malicious users on the device level.

III

BLQRISK

- Finds vulnerabilities in your smart contracts and provides a guide detailing how to fix those problems.

We'd be delighted to discuss and expand this business case with you

Challenge: Protecting Your Apps Is Critical Yet Complicated

App hacking is a threat to your business

- Hackers can increasingly identify, map and leverage app vulnerabilities to commit IP theft, inject malware, or steal confidential information.

Vulnerability scanning only partially mitigates the risk

- Intermittent tests do little to diagnose discontinuous security vulnerabilities that might be introduced, for example, with each new code update

Hiring a dedicated team is expensive

- Scouting and recruiting security experts for penetration testing is complicated and costly process

Discovering security threats and protecting your technology is complicated, but critical for your success

Proposal: SEWORKS is Your Appsec Service On-Demand

What we do

- 1 We help you secure your web assets**
 - Thanks to our advanced deep learning & AI technology identifying known and unknown security risks
- 2 ...we deploy offensive security for web apps**
 - To help you prevent damages in advance by using deep learning pen testing into an offensive security strategy
- 3 ...and we act as a private red team on duty**
 - Run deep learning pen testing technology for accessible and affordable security helping to find and prevent damages in advance.

What upside for eXo Platform

- ➔ Continuously assess your security vulnerabilities
- ➔ Automate risk identification and efficiently remediate
- ➔ Monitor the cyber landscape for new threats

Our clients see immediate impact in terms of technology risk reduction

The Future Of Third Party Cyber Risk Management

Our product team is available to demonstrate how SEWORKS can streamline a cyber risk management program. Contact us to schedule an interactive demo.
